

# GLS LIGHTING AND CONTROLS SPOTLIGHT

## **Illuminate and Inspire your Spookiest Dreams with Gantom.**

Before the scariest time of the year is over, GLS presents our haunted house gurus, Gantom Lighting and Controls.

Originally founded as Darklight in Spring of 2010, they quickly established themselves in the haunted attraction industry. In 2014, after exponential growth, Darklight was rebranded to Gantom in honor of their founder's last name "Gan" and "Phantom" after their humble beginnings in the Halloween lighting industry.

"We specialize in illumination of low-light and space constrained environments where traditional theatrical luminaires aren't suitable," ([Gantom 2020](#)).

Their Precision Series was built for compactness, safety, modularity, and ease of use in mind to allow lighting designers to illuminate environments impossible to illuminate with larger fixtures.

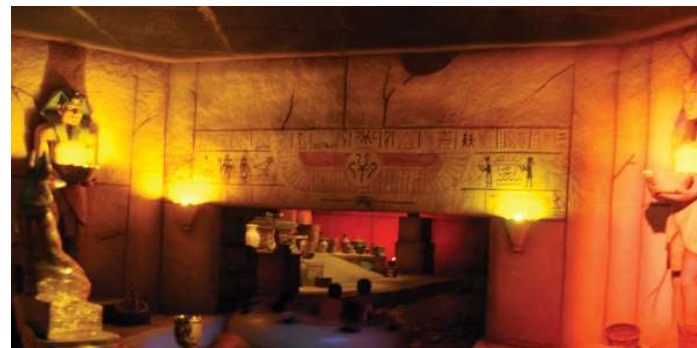

In late 2012, the Gantom series was introduced as extensions to compact controllers to add dynamic element to luminaires designed for professional lighting and architectural markets. The Storm series represents Gantom's official entry into the architectural lighting market.

Gantom's award-winning products are the "secret weapon" of many lighting designers and industry experts with a wide range of installations around the world like theme parks, museums, bars and clubs, casinos, and haunted attractions.

Previous installs include [The Nest](#) in Arizona, [Lotte World](#) in South Korea, and Colorado's very own [Lost River of the Pharaohs](#) at Water World!
